

optimain INTERFACES

Integrated Information

The Optimain® Product Suite provides integrated views of many different types of asset information, allowing:

- ▼ **Optimain DS** users to develop optimal replacement and repair budgets, using dynamic evaluation of the economics and risk of pipeline replacement projects
- ▼ **Optimain ACM** users to interact with a complete register of company assets and manage regulatory compliance programs across all asset types
- ▼ **Optimain xDR** users to have updated views of excavation damage risk and add significant support to their damage prevention initiatives

GIS

Geospatial Information

Knowing the location of your assets and how they are connected are key components of a complete asset management solution. Many utilities have made significant investments to capture and maintain geospatial information. With Opvantek's GIS interface, these rich geospatial data sources can be integrated into the entire Optimain Product Suite.

Our standard GIS Interface will enable all of your Opvantek software to:

- ▼ **Load** asset data and relationships from the GIS
- ▼ **Link** asset records to their geospatial location
- ▼ **Update** attributes in one system, and automatically synchronize in the other (GIS to Optimain or Optimain to GIS)
- ▼ **Navigate** seamlessly between the Optimain user interface and the GIS map display
- ▼ **Create and Analyze** data from Optimain using standard GIS Tools

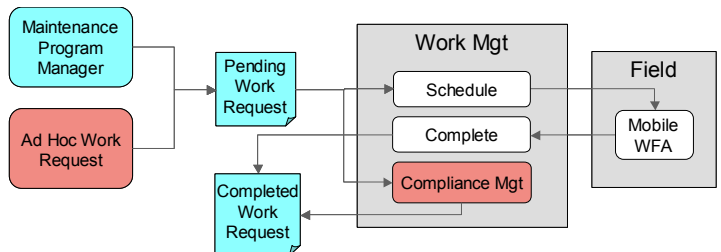

Each of the applications is designed to interact with any major GIS platform including:

- ▼ GE Smallworld & GDO
- ▼ ESRI via ArcEngine SDK
- ▼ Intergraph G/Technology

WMS

The Optimain WMS interface supports two-way interaction with standard or company-grown work management systems. Utilities can create, track, and complete scheduled, ad-hoc, and emergency maintenance activities. This fully integrated solution enables efficient system-wide control and communication, while optimizing the use of time, materials, equipment, and personnel.

WMS Integration

Service Oriented Architecture

Opvantek offers full Web Service Integration to exchange data with corporate systems. You can:

- ▼ Incorporate data captured in the work management system into the Optimain DS risk assessments
- ▼ Automatically send compliance or remediation work requests from Optimain ACM to a WMS
- ▼ Integrate premise or other information from a CIS into the Optimain DS risk assessment
